

Assignment: Nested Loops in Python

Objective:

To practice using **nested loops** (**for** or **while**) for repetitive tasks in Python.

Instructions:

- Write each program separately.
 - Use proper comments and meaningful print statements.
 - Test your code for different values.
-

Programs:

1 Display Multiplication Tables from 1 to 5

Write a program using **nested loops** to display multiplication tables from 1 to 5.

- Outer loop → numbers 1 to 5
 - Inner loop → multiply by 1 to 10
-

2 Print a Number Pyramid

Example:

```
1
1 2
1 2 3
1 2 3 4
1 2 3 4 5
```

3 Print a Star Pyramid

Example:

```
*
* *
* * *
* * * *
* * * * *
```

4 Display a Reverse Number Pyramid

Example:

```
5 4 3 2 1
4 3 2 1
3 2 1
2 1
1
```

5 Print Multiplication Table of a Number (Nested Loops)

Enhance the program: Ask the user for a number `n` and display tables from 1 to `n` using **nested loops**.
