

Assignment: Grade Calculator in Python

Objective:

Write a Python program to calculate and display the grade of a student based on their percentage.

Instructions:

1. Accept the **percentage** as input from the user.
 2. Determine the **grade** based on the following criteria:
 - A → 80 and above
 - B → 60 to 79
 - C → 40 to 59
 - D → Below 40
 3. Display both **percentage** and **grade** clearly as output.
-

Sample Input / Output:

Example 1:

```
Enter your percentage: 85
Percent = 85.0
Grade = A
```

Example 2:

```
Enter your percentage: 57.5
Percent = 57.5
Grade = C
```

Tasks:

Task 1:

Write the program as shown above and test it for different percentage values.

Task 2 (Challenge):

Modify your program so that:

- It also accepts **student name** as input.

- The output is displayed in a formatted message, for example:

```
Student: Ayesha  
Percentage: 73.5  
Grade: B
```

Task 3 (Optional Enhancement):

- If the percentage is **less than 35**, print an additional message: "Sorry, you have failed. Try again next time."
 - Otherwise, print: "Congratulations! You passed."
-

Expected Learning Outcomes

After completing this assignment, students will:

- Understand how to use **if-elif-else** conditions.
- Learn how to take **user input** and display **formatted output**.
- Get familiar with **conditional logic** and **comparison operators** in Python.
